
Smart Lead Qualification Engine

CRM Simulation | Make | Gmail | Google Sheets

1. System Objective

This system automatically qualifies inbound leads based on budget tier and routes them into structured lifecycle paths with automated follow-up logic.

2. Problem Statement

Manual lead handling causes:

- No prioritization
- Delayed response
- No lifecycle tracking
- No follow-up automation

I structured intake engine was implemented to standardize qualification and life cycle management.

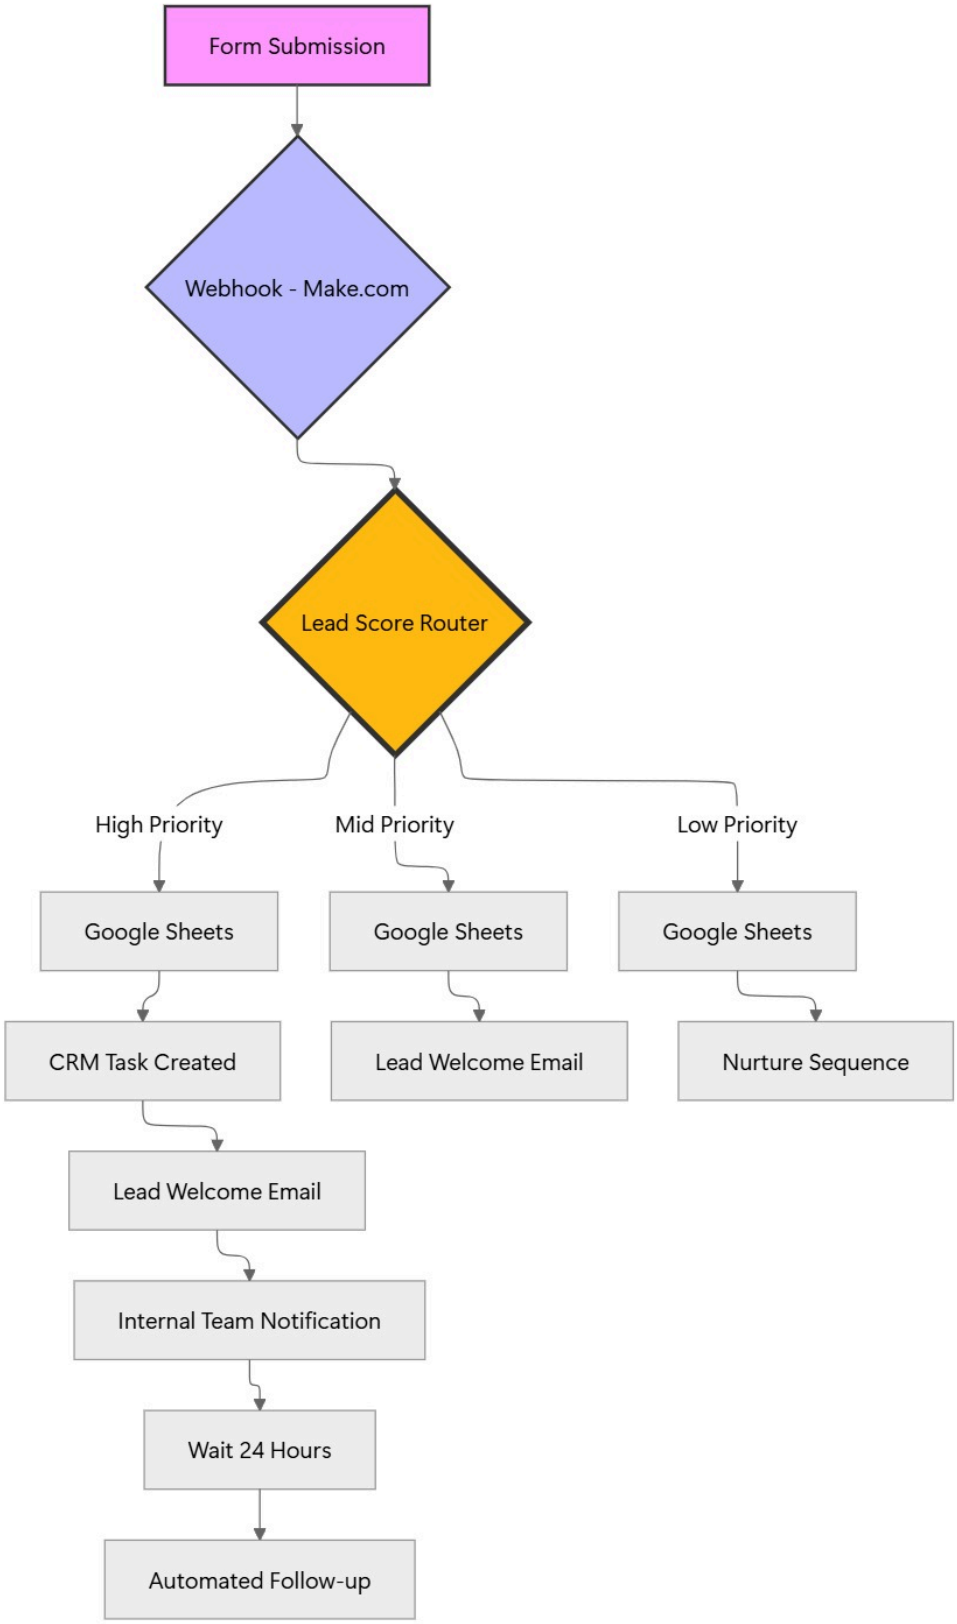
3. Tools Used

- Make.com (Webhook Trigger + Router Logic)
- Google Sheets (CRM simulation Layer)
- Gmail (Client Communication + Internal Alerts)

- Custom HTML Form (Webhook-Based Intake)

4. Architecture Overview

The system is designed to route inbound leads into structure lifecycle paths based on qualification logic and automated decision layers.



Form Submission
Webhook - Make.com
Lead Score Router
High Priority
Mid Priority
Low Priority

CRM Task Created
Lead Welcome Email
Nurture Sequence
Lead Welcome Email
Internal Team Notification
Wait 24 Hours
Automated Follow-up

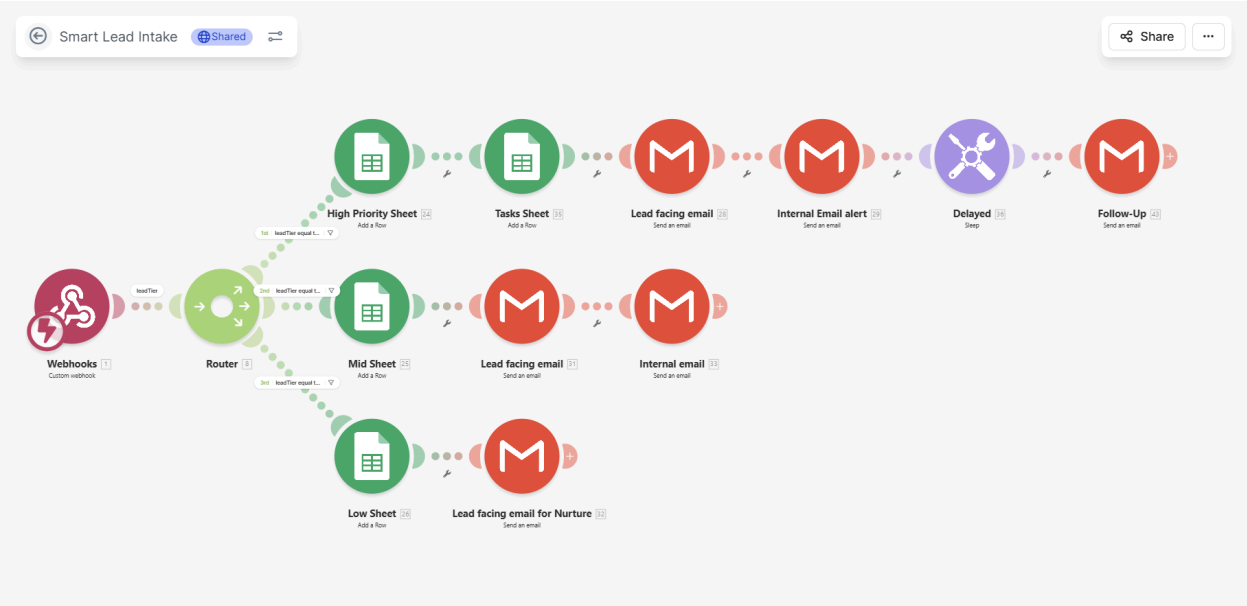
End-to-end automation flow from form submission to lifecycle execution across priority tiers.ZZ

5. Lead Tier Logic

Leads are classified into High, Mid, and Low tiers based on qualification criteria, triggering separate automation branches.

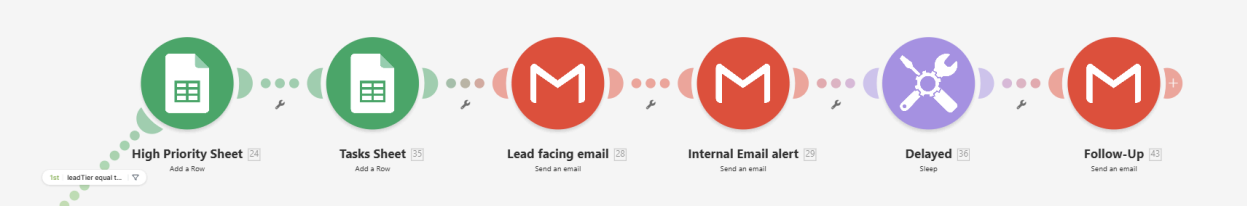
Lead Tier	Budget Range	Lead Status	Automation Action
High	$2,000+	**Open**	Direct Consultation
Mid	$500 – $2,000	**Qualified**	Structured Follow-up
Low	Under $500	**Nurture**	Educational Email

Full Routine Workflow (Make Scenario)



Routine implementation showing webhook trigger, tier segmentation, and branch execution logic.

High Priority Branch

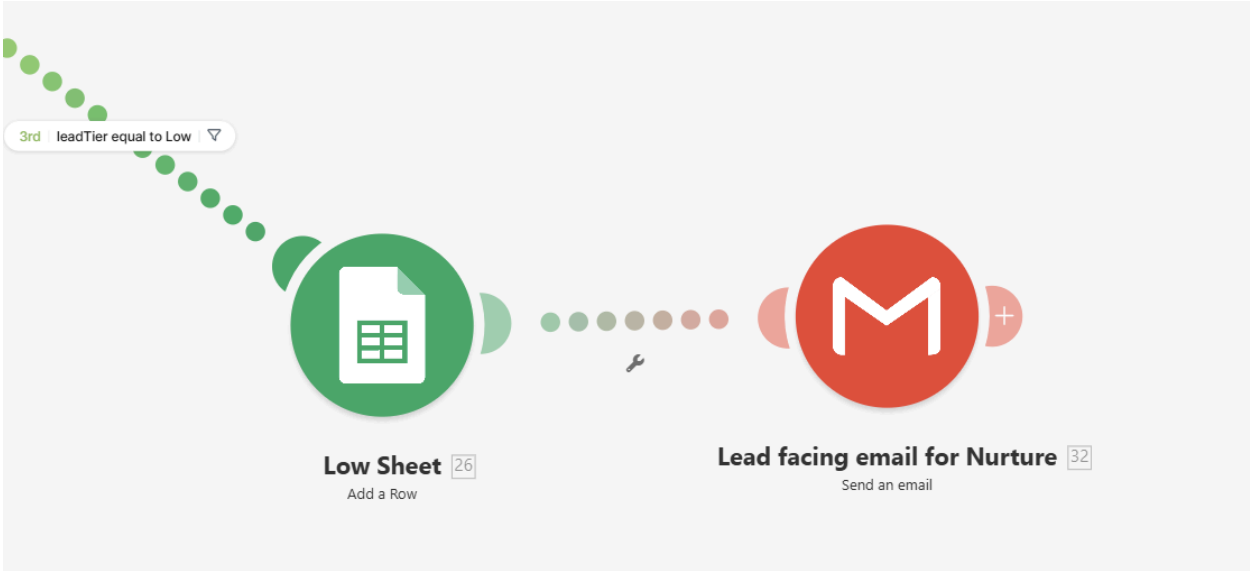


High-value leads are routed to priority handling, CRM task creation, immediate consultation email, internal notification, and timed follow-up.

Mid Priority Branch

Mid-tier leads are stored in CRM and receive structured qualification follow-up without priority escalation.

Low Priority Branch



Low-budget leads enter nurture workflow focused on long-term engagement and educational messaging.

6. Lifecycle Layer

- The status column simulates the CRM stage
- Follow-up delay simulates reminder logic
- Nurture email simulates long-term engagement

1. CRM Structure

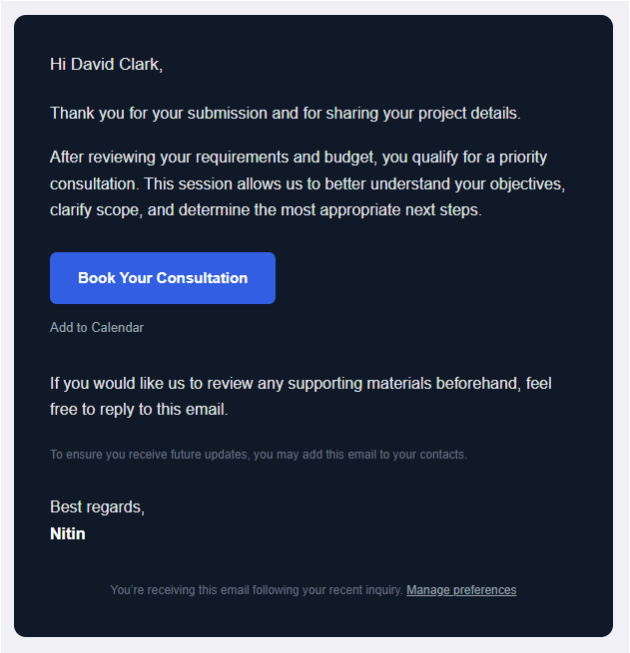
Submitted At	Full Name	Email	Budget	Budget Value	Lead Tier	Classification	Status	Action
2026-02-25T12:15:57.186Z	David Clark	david.clark@example.com	Above $2,000	above2000	high	High Priority Lead	Open	Offer Direct Consultation Booking — strong budget signal, contact within 24 hours.

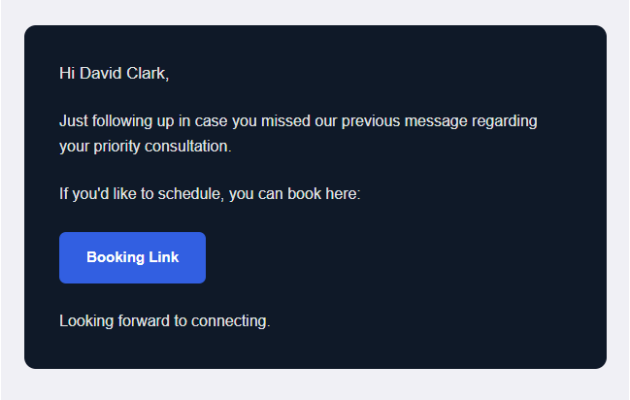
CRM simulation including lead classification, lifecycle status tracking, and predefined action mapping.

2. Email Lifecycle



Immediate consultation invitation sent to qualified high-priority leads upon routine completion.

3. 24-Hour Follow-Up Reminder



Delayed reminder email executed to prevent lead drop-off and maintain response continuity.

8. Improvements (Future Scope)

The current system simulates a structure lifecycle automation. Future enhancement can expand communication channels and CRM depth.

- Centralized CRM integration for unified pipeline visibility
- Event-based booking directions to auto-update the lifecycle stage
- Scheduled execution model replacing static delay logic
- Real-time messaging integration via WhatsApp API
- Dynamic stage transitions based on engagement triggers

9. System Outcome

The system eliminates manual prioritization, reduce response delay, and ensures structure lifecycle tracking across all inbound leads.

It provides predictable automation flow and prevents lead drop-off through controlled follow-up logic.
